Attachments: 2019-09-18 EPA 5YR (5th) for Triple Site Final.pdf

Because that is for Intersil-Siemens ☹️ I send you the wrong 5YR! See PDF Page 5 and PDF pages 22-23 (GWUC)

PDF Page 5

There have been no changes to the ARARs which groundwater cleanup goals were based on since the ROD was issued. Land use has not changed since the last FYR. Exposure pathways for soil and groundwater are being controlled. A covenant and agreement that prohibits use of groundwater, excavation of soils and prohibits land use for was recorded in 1992.

The remedy at the TRW Site currently protects human health and the environment because exposure pathways for soil and groundwater are being controlled. Exposure pathways to contaminated groundwater that could result in unacceptable risks are addressed in an environmental covenant. ⁽ⁱⁱⁱ⁾ The risk due to vapor intrusion for the current commercial land use has been addressed. However, in order for the remedy to be protective in the long-term, a revised soil and groundwater remedy for the TRW Site should be selected, as the remedy selected in the ROD is no longer operating. The revised remedy should also address vapor intrusion assessment and response procedures to ensure the long-term stewardship of the vapor intrusion mitigation measures currently in place, as well as potential vapor intrusion in the event of future land use changes, as vapor intrusion was not addressed in the 1991 ROD.
